MUNICIPAL SERVICES

Streets cleaning

Manual and mechanical sweeping of streets, squares, sidewalks and public areas.

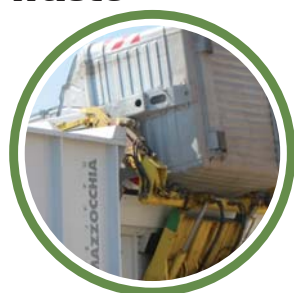

Emptying of wastepare basket.

Pulling up weeds between narrow spaces of the sidewalks and the border of the streets.

Removal of dung.

Cleaning of water drainage canal.

Collecting of municipal waste

The service of collection of municipal waste makes use of the employment of "ecological" waste collection vehicles and street garbage dumpsters of various dimension.

Market place service

At the close of the weekly markets, **Serveco**'s operators go on the place in order to carry out cleaning actions to remove the waste left on the ground and to separately collect packages in cardboard and in polyethylene.

Rotting carcass

Serveco carries out a flying squad of removal, transport and disposal - according the sanitary laws in force - of the rotting carcass of the present animals on the public ground.

Cemetery waste

Serveco supplies also the collection of the waste coming from the activities of exhumation of a corpse and disearthing. Because of the uniqueness of this kind of wast, the fragments of wood, zonc, fabric, clothes rest, etc...are packaged in suitable containers and disposed in authorized thermal destruction plants.

Street weeding service

To free from rising along sidewalks, public flower-beds, tree holes... is normally carried out from the **Serveco** staff assignend to the manual and mechanical cleaning within its competence area.

Snow removal

In snow case all **Serveco** staff, employed in the cleaning of the public ground, is activated also during the night in order to face the emergency. The removal of the snow regards above all the main access roads to the cicy, the areas near the shoocs, hospotals, pharlacies and important public buildings.

Stretch of coast and bays

Serveco pays always particular attention to maintain clean these areas because is aware of the fact, that the sea constitutes a grat economic resources.

Cleaning of grids, manhole covers

All the pulbic drinking water fountains, the grids, the channels and the manhole covers of white drain (rain water) are kept clean daily.

For the cleaning are used biodegradable probucs and according to the most recent disposition in matter.

Every month is provided, moreover, the mechanical aspiration, through sewage suction vehicles, of the dump inside of the manhole covers and the cleaning of the tract of the piping of connection with the net of the white drain in order to guarantee the normal outflow of waters.

Disinfection, and...

...Rat disinfestations and other kind of disinfestations are services whose activation is preceded, on the interested area, from a careful analysis of the various factors that concur to the proliferation of rapes, injurious flies, mosquitoes, bugs...

All the stagnation and all kind of water canalisation with their infesting species living in and their life-cycles are examined and registered.
